| The MAILING DATE of this communication app Period for Reply | ears on the cover sheet with the c | orrespondence address | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | | | | |

Art Unit: 3744

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "inlet opening . . . of a larger area than that of the outlet opening" of claim 2 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Application/Control Number: 10/582,543

Art Unit: 3744

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

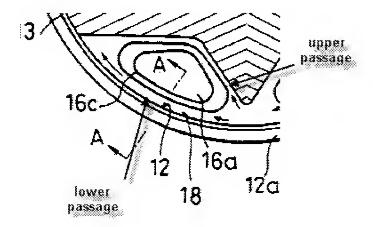

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Page 3

Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshioka et al.

Yoshioka et al. show a stacked plate heat exchanger with plates brazed together to form interleaved passages for two fluids exchanging heat. The problem of stagnant flow near sealed off pass through ports for the other fluid is dealt with in much the same way as the claimed invention, i.e. by the provision of dual passages that encourage flow around the sealed port (see Figs. 3 and 4):

Although Yoshioka et al. employs the term "brazing" instead of "soldering" to refer to the means of joining the plates to each other, the terms are considered equivalent in that both refer to a fusion bonding process involving fusible alloys that have melting points lower than the material being joined. Regarding the claimed "ridges", either the raised portions 10a, 12 shown in Fig. 4 and/or the terminal region of the herringbone ridged pattern of the plates would be readable on the claimed ridges, as these elements at least partially define the passages that surround the port 16a.

Regarding claim 3, this claim concerns the intended use of the claimed heat exchanger and does not structurally distinguish over what the prior art discloses.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshioka et al.

Although the Yoshioka et al. reference discusses the advantages of circular plates over rectangular plates, implying that the circular configuration is a preferred embodiment, such rectangular plates are very well known in the art, and to employ such a more conventional shape while retaining the

stagnation reducing passages taught in Yoshioka et al. would have been obvious to one of ordinary skill in the art. See MPEP 2123.

Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshioka et al. in view of Bertilsson et al.

It is known in the art to use stacked plate heat exchangers of the type shown in Yoshioka et al. for exchanging heat for three fluids as well as for two fluids as shown by Bertilsson et al. It would have been obvious for one of ordinary skill in the art to adapt the exchanger of Yoshioka et al. for more than two fluids if a particular application called for such capability.

Regarding claim 8, this claim concerns the intended use of the claimed heat exchanger and does not structurally distinguish over what the prior art discloses.

Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The remaining references show various stacked plate heat exchanger designs.
